

How to hear great in  
Hope Reformed  
Church  
of  
Sheboygan

Hear the spoken Word  
with ease and without  
background noise

What *is* a Hearing Loop?

Our church  
offers a  
hearing loop

Hear the spoken Word  
with ease and without  
background noise

What *is* a Hearing Loop?

Hearing Loops broadcast  
clear audio from the sound system  
to the telecoil (T-coil) found in most  
hearing aids and cochlear implants

offers a  
hearing loop

Hear the spoken Word  
with ease and without  
background noise

What *is* a Hearing Loop?

Hearing Loops broadcast  
clear audio from the sound system  
to the telecoil (T-coil) found in most  
hearing aids and cochlear implants

### **Do you use hearing aids?**

Ask your audiologist about telecoils in your devices. Many hearing aids have this no-cost feature, but it may not have been activated. The T-coil program is (usually) accessed by pushing a button on the hearing aid and must be activated by your hearing aid provider. Be sure to ask for written instructions as well as an in-office telecoil demonstration.

### **Hearing loops will improve your hearing aids!**

Hearing aids have improved in the last decades, but do not restore hearing to normal and tend to amplify all sounds, including the background noises. Hearing loops help overcome this problem by streaming clear sound, without echoes or background noise, into hearing aids.

### **No hearing aids. No problem Try one of our hearing loop headsets**

We offer listening devices. Ask an usher. Try one of the listeners with a set of "do not return but keep for future use" headphones or earbuds. You'll be surprised how much easier you hear.

### **If you have questions**

about hearing aids and telecoils, talk to your hearing care provider. If you want to know more about connecting to hearing loop, contact audiologist dr. Juliëtte Sterkens  
[jsterkens@hearingloss.org](mailto:jsterkens@hearingloss.org)
